Profile

I really love everything related to the web development since I was teenage. I always was fascinated how the websites were designed and I knew this is what I wanted to do. It is on the front end where the magic happens and the Javascript is the spell. With this is mind I use my time to improve skills to help me to do that.

- Great experience in web design, web development, and graphic design.
- W3C web standards based markup, utilising semantic markup for structure and CSS for presentation.
- Worked with remote teams.
- Always trying to learn new frameworks.
- Experience as a team leader.

Experience

Front End Engineer

Rede Wireless (August 2014 - December 2014)

In my role, I worked using AngularJS to design high level interfaces for internal management applications. I also involved the back end team to use best practices of client side development.

Front End Engineer

MGR Tecnologia (November 2010 - July 2014)

I worked as one of the responsible to building a cooperative social network called Cahier. My focus was in the client side development using HTML, CSS and Javascript using jQuery library. I also introduced to the team how the observer pattern can be helpful to big application.

Front End Engineer

Agitz (January 2010 - October 2010)

Working with many clients to provide functionals websites for your business.
